ONEIDA-SABINE LAKE: UPDATES & NEXT STEPS

This summer, ITC hosted a series of seven Landowner Open Houses, as the third phase of our public and community engagement process for the Oneida-Sabine Lake Project. Thank you to the more than 900 people who attended and participated in these events. Your feedback is critical in our efforts to refine the route options as we move towards selecting a proposed route.

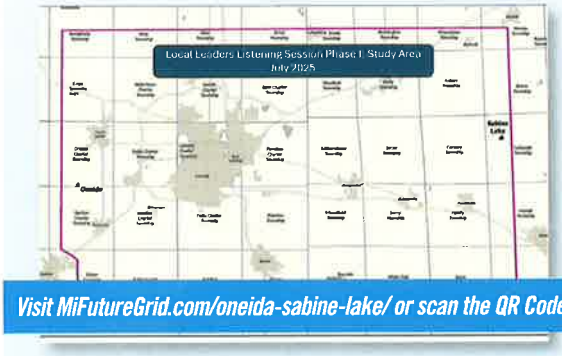

At the Landowner Open Houses, we shared and sought feedback on seven route options, which were based, in part, on the information we received during our series of Community Listening Sessions that took place earlier this year.

During the Landowner Open Houses, we received more than 1,500 feedback submissions on the seven route options. Our team is currently reviewing the information gathered and incorporating it into our routing analysis, as appropriate. This information, along with additional technical and engineering review, will be used to select a proposed route for the Project. It will also aid our identification of one or more alternate routes for the application. Michigan Electric Transmission Company (METC), ITC's subsidiary, will file the application and plans to file the construction plan with the Michigan Public Service Commission this fall. The construction plan will include the Proposed and Alternate Routes.

In January 2027, we will host Public Meetings in each municipality that a route may pass through. We will share more details on the dates and locations of those Public Meetings later this year.

Throughout the Project's development, we will continue to prioritize community engagement, public feedback and information sharing. Thank you again for your continued involvement, and we look forward to building together.

COLLABORATION IN ACTION

We have a video available that illustrates the collaborative planning process in action, from the study area shared during the initial Local Leader Listening Sessions in July 2025 to the route segments shared during the Community Listening Sessions in January and February 2026, to the seven preliminary route options shared at the Landowner Open Houses in July 2026.

PROJECT TIMELINE

WHERE WE'VE BEEN

- **Summer 2025:** ITC met with local officials and community leaders at Local Leader Listening Sessions to introduce the project and collect input on the community's plans and needs.
- **January and February 2026:** Residents near a potential route segment were invited to attend a Community Listening Session to learn more about the project and share feedback on the initial route network.
- **July 2026:** Residents were invited to attend Landowner Open Houses to view and provide input on seven route options.

WHAT'S NEXT

- **Fall 2026:** Construction plan will be filed with the Michigan Public Service Commission (MPSC), which will include proposed and alternate routes for the project.
- **January 2027:** Public Meetings will be held to share the proposed and alternate routes and receive public comment. After the Public Meetings, we will seek siting authority to construct the project, and the MPSC will review and approve a final route.
  Watch for invitations in the mail.

ABOUT ITC

ITC, through its subsidiaries ITC*Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains nearly 9,100 circuit miles of high-voltage electric lines and approximately 400 transmission substations throughout Michigan's Lower Peninsula. METC will build, maintain and operate the Oneida-Sabine Lake Project. ITC has been headquartered in southeast Michigan since 2003 and employs more than 900 Michiganders.
